

HANGAR DOORS FOR CIVILIAN AND MILITARY AIRCRAFT

Equipped for all purposes – burglar-resistant, bullet-proof, cheap to maintain, durable and naturally centrally controlled.

BATOR HANGAR DOORS – THE TAILOR-MADE SOLUTION FOR CIVILIAN AND MILITARY AIRCRAFT.

REQUIREMENTS

Bator hangar doors for civilian and military airfields meet a wide range of requirements:

- > Maximum opening width thanks to optimised folding technology
- > Separately sliding door sections (part opening is possible)
- > Built-in emergency electricity supply to ensure continuous availability
- > Protection against unauthorised access (to resistance class 3)
- > Good thermal insulation for a constant indoor temperature (low U-value)

DESIGN AND FITTINGS

On all BATOR door systems – whether they are folding, telescopic or sliding doors – the door is perfectly matched to the façade down to the last detail. Attention is paid to colour, fire escape doors, motor and control system functionality as well as the best possible acoustic and thermal insulation.

EXCELLENT PROTECTION AGAINST CORROSION

For extreme conditions where rust has to be avoided, or protection from corrosive gases is required, BATOR offers hangar doors made in premium grade steel, fully hot-dip galvanised and then powder-coated.

MOTOR AND CONTROLS

The doors are controlled using the latest PLC technology. Our priorities are maximum reliability, ease of use and safety.
